The MAILING DATE of this communication appears on the cover sheet with the correspondence address Period for Reply						
A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION. - Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication. - If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication. - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 2. Claims 1-23 are rejected under 35 U.S.C. 102(b) as being anticipated by WO01/73447 (using US Patent 6796713 to Landrieve as an English equivalent).

Re: claims 1-5, 16, 18-20, 22, and 23. Landrieve shows in figure 6 a braked rolling bearing device of the type for a control wheel, comprising an outer part 2 and an inner part 4, one (the inner part) being able to rotate with respect to the other, which does not rotate, by means of at least one row of rolling elements 6 arranged between the rotating and non-rotating parts, the device further comprising a means for detecting rotating parameters 27,28,35, a means 29,30,40,41,33b for braking the rotating part (Examiner notes that by virtue of elements 29,30,40,41, continuously contacting inner part 4 via element 33b the frictional force between the contacting elements provides a continuous braking force on the rotating part during rotation thereof), the means for braking comprising an annular friction member 33b and at least one component equipped with a flexible tab 29 bearing against the annular friction member via element 41 to continuously brake the rotating part.

Re: claim 6. Landrieve shows in figure 6 wherein the means for braking is pushfitted onto a support 25 of the outer part. Application/Control Number: 10/735,634

Art Unit: 3683

Re: claim 7. Landrieve shows in figure 6 wherein the means for braking is pushfitted onto a shaft 33c secured to the inner part.

Re: claims 8 and 9. Landrieve shows in figure 6 wherein the means for braking comprises a push-fit portion 40a that extends axially with respect to an axis of rotation of the device and a portion equipped with the tabs 29 that extends radially with respect to the axis of rotation, the tabs extending axially with respect to the axis of rotation.

Re: claim 10. Landrieve shows in figure 6 wherein the means for braking forms a sealing means 41 by way of a narrow passage or space between 33b and the bottom of 40.

Re: claim 11. Landrieve shows in figure 6 wherein the annular friction member comprises a support 33b and a friction lining 41.

Re: claims 12-14. Landrieve shows in figure 6 wherein the annular friction member comprises a support 33b mounted axially between the inner part the right side portions of the inner part and a shoulder (shown below the lead line of number 29) of an element 33c secured to the inner part.

Re: claim 15. Landrieve shows in figure 6 a seal 42 protecting the means for braking.

Re: claim 17. Landrieve shows in figure 6 the means for detecting the rotation parameters comprising a sensor mounted in a cover 19 equipped with a wire outlet for element 20.

Application/Control Number: 10/735,634 Page 4

Art Unit: 3683

Re: claim 21. Landrieve shows in figure 6 a cover 25 fixed onto an end of a casing 19 enclosing the device so as to close off the casing on a side (of element 32) opposite to the control wheel 33c.

Response to Arguments

3. Applicant's arguments with respect to claims have been considered but are moot in view of the new interpretation of the Landrieve reference. Examiner notes that in the new interpretation the annular friction member 33b is rotating by virtue of it being connected to rotating part 4 and the at least one component equipped with flexible tabs is non-rotating by virtue of it being connected to non-rotating part 2.

Conclusion

4. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
